

Comparison of Florence-2 Base vs. Finetuned Model on @_page_5_Figure_6.jpeg

Image Used

- **Filename:** @_page_5_Figure_6.jpeg
- **Description:** Technical drawing of a timing belt system (see below for model outputs).

Model Outputs

Base Model Output

```
{'<MORE_DETAILED_CAPTION>': "The image is a technical drawing of a timing belt, which i
```

Finetuned Model Output

```
{'<MORE_DETAILED_CAPTION>': 'A diagram of a timing belt. It is labeled as ME-00072 in t
```

Comparison & Analysis

- **Base Model:**
 - Provides a much more detailed and verbose description.
 - Attempts to describe the structure, labels, and even the arrangement of components in the diagram.
 - Some details are inaccurate or overly speculative (e.g., mentions of numbers/letters labeling teeth, which may not be present).
- **Finetuned Model:**
 - Gives a concise and focused description.
 - Accurately identifies the subject (timing belt diagram) and the label (ME-00072).
 - Omits speculative or unnecessary details, resulting in a more precise and relevant caption.

Summary:

- The finetuned model produces a more succinct and accurate caption for this technical image, while the base model tends to over-describe and sometimes invents details. This suggests the finetuning improved the model's ability to focus on the most salient and factual aspects of technical diagrams.
